Problem Statement 1

I am	I'm trying to	But	Because	Which makes me feel
A customer support executive	I am trying to quickly find answers to customer questions	Relevant information is scattered and searching takes time	FAQs and support information are not centrally organized	Frustrated and less productive

Defined Problem: Customer support executives need a centralized and searchable FAQ system because manually searching through scattered information makes it difficult to provide quick and consistent answers to customers.

Problem Statement 2

I am	I'm trying to	But	Because	Which makes me feel
A content creator / FAQ manager	I am trying to create and maintain useful FAQs	Creating and updating FAQs manually takes considerable time	Many questions are repetitive and require similar answers	Overwhelmed and time-consuming

Defined Problem: FAQ managers need an efficient way to generate and maintain FAQs because manually creating repetitive support content consumes time and effort.

Combined Core Problem

Organizations need a centralized, secure and intelligent FAQ management system that reduces repetitive support work, makes information easier to search, and helps generate useful FAQ content automatically.

Proposed Solution

AnswerBot is an AI-powered FAQ and customer-support automation system that uses Google Gemini AI for FAQ generation, MongoDB for information storage, and REST APIs for secure FAQ management and search.

Key Solution Areas

- AI-powered FAQ generation.
- Centralized FAQ management.
- Fast keyword and semantic search.
- User authentication and role-based access.
- FAQ categorization.
- Secure database storage.

- CRUD operations for FAQ management.
